Developers:

Head of the department of public health,
healthcare and socio-economic sciences,
doctor of medical sciences, professor

Z.R. Alikova

Senior lecturer of the department of public health,
public health and socio-economic sciences,
candidate of medical sciences

L.N. Gabaraeva

Reviewers:

1. Yakhyaeva Z.I., doctor of medical sciences, Head on the Department of public health and healthcare medicine Institute of the Chechen State University

2. Magaev K.A. Candidate of Medical Sciences, Chief Physician of the State Budgetary Healthcare Institution "Polyclinic No. 1" of the Ministry of Health of the Republic of North Ossetia -Alania

Content of the work program

1. Name of the discipline;
2. The list of planned results of training in the discipline, correlated with the planned results of the development of the educational program;
3. Specifying the place of the discipline in the structure of the educational program;
4. The volume of the discipline in credit units indicating the number of academic or astronomical hours allocated for contact work of students with the teacher (by type of training) and for independent work of students;
5. The content of the discipline, structured by topic (sections) with an indication of the number of academic or astronomical hours allocated to them and the types of training sessions;
6. The list of educational and methodological support for independent work of students in the discipline;
7. Fund of evaluation funds for conducting intermediate certification of students in the discipline;
8. The list of basic and additional educational literature necessary for the development of the discipline;
9. The list of resources of the information and telecommunications network " Internet "(hereinafter - the "Internet"), necessary for the development of the discipline;
10. Guidelines for students on the development of the discipline;
11. List of information technologies used in the implementation of the educational process in the discipline, including a list of software and information reference systems (if necessary);
12. Description of the material and technical base necessary for the implementation of the educational process in the discipline.
13. Conducting educational activities using e-learning and distance learning technologies.

13. 2. The list of planned results of training in the discipline and the results of the development of the educational program

4. <http://studopedia.ru>

10. Guidelines for students on the development of the discipline

Training consists of classroom sessions (118 hours.), including a lecture course and practical classes, and independent work (62 hours.).

The student's work in a group creates a sense of collectivism and sociability.

Independent work contributes to the formation of accuracy and discipline.

Independent work with literature, writing essays form the ability to analyze medical and social problems, the ability to use natural science, biomedical and clinical Sciences in various types of professional and social activities.

Various types of educational work, including independent work of the student, contribute to mastering the culture of thinking, the ability to logically correct its results in written and oral speech; readiness to form a systematic approach to the analysis of medical information, the perception of innovations; form the ability and readiness for self-improvement, self-realization, personal and subject reflection.

Various types of educational activities form the ability to re-evaluate the accumulated experience, analyze their capabilities, the ability to acquire new knowledge, use various forms of training, information and educational technologies in the context of the development of science and practice.

When studying the discipline, it is necessary to use the main and additional recommended literature. Practical classes are conducted in the form of an interview (an oral survey during the class), checking the completion of written homework, answers to test tasks, evaluating students' knowledge and skills based on the results of solving situational problems, conducting business games and tests.

In accordance with the requirements of the Federal state educational system IN the specialty 31.05.01 "Medical care" in the educational process, active and interactive forms of classes are used (videos, situational tasks, independent extracurricular work). The share of classes held in interactive forms is 50% of classroom classes.

Work with educational literature is considered as a type of educational work in the discipline "Public health and health, health Economics" and is performed within the hours allocated for its study (in the section of the SRS).

Each student is provided with access to the library collections of the Academy and the Department.

11. List of information technologies used in the implementation of the educational process in the discipline

Semester	Occupation lectures, practical classes, independent work	Educational technologies used (active, interactive)	Number of hours	% lessons in interactive form	List of software
VI, VII	lectures	Questions and tasks (sets of tasks) for traditional, interactive lectures, problem lectures, methodological recommendations for teachers	36	15	Microsoft Office PowerPoint Acrobat Reader Internet Explorer
VI, VII	practical classes	Questions and tasks (task suites) for a round table, role-playing and business games, brainstorming, guidelines for students and teachers	82	20	GUARANTOR.ROO Информационно-правовой портал Microsoft Office PowerPoint Acrobat Reader Internet Explorer
VI, VII	independent work	Questions and tasks (sets of tasks) for a round table, role-playing and business games, brainstorming, educational and research work, guidelines for students and teachers	62	15	«Consultant of a student» GUARANTOR.ROO Microsoft Office PowerPoint Acrobat Reader Internet Explorer

12. Description of the material and technical base necessary for the implementation of the educational process in the discipline

As the material and technical base of the Department, there are training rooms with a total area of 111.1 m².

The study rooms have been renovated, meet sanitary and hygienic requirements, include 40 student tables, 80 chairs, 4 blackboards (satisfactory condition).

№ п/п	Name of the equipment	Quantity	Technical condition
1	2	3	4
Специальное оборудование			
1.	a laptop	3	satisfactory

2.	multimedia projector	2	satisfactory
3.	student Board	4	satisfactory

13. Conducting educational activities using e-learning and distance learning technologies

In the context of the introduction of restrictive measures (quarantine) associated with an unfavorable epidemiological situation, the threat of the spread of a new coronavirus infection and other force majeure events that do not allow full-time training, it is possible to study this discipline or part of it using e-learning and distance educational technologies.

Teaching the discipline in the above situations will be carried out through the development of an electronic course with access to video lectures and interactive course materials: presentations, articles, additional materials, tests and various assignments. When conducting training sessions, monitoring progress, as well as intermediate certification of students, platforms of the electronic information and educational environment of the academy and / or other e-learning systems recommended for use in the academy, such as Moodle, Zoom, Webinar, etc.

Lectures can be presented in the form of audio, video files, "live lectures", etc.

Conducting seminars and practical classes is possible in on-line mode both in synchronous and asynchronous modes. Seminars can be conducted in the form of web conferences.
