Thematic plan of practical classes

Discipline Propaedeutics of internal diseases

Well 2

Faculty medicinal (foreign students)

For the spring semester of 2022-2023 academic year

Topic number	Topic name	Lesson duration
1.	Introduction. The subject and tasks of propaedeutics of internal diseases. Diagram of the medical history.	2h
2.	Inquiry. General examination of the patient	2h
3.	Questioning and examination of patients with respiratory diseases.	2h
4.	Palpation of the chest. Determination of soreness, elasticity of the chest, voice trembling	2h.
5.	Methodology and technique of percussion. Comparative percussion of the lungs	2h
6.	Topographic percussion of the lungs	2h
7.	Auscultation of the lungs. Normal breath sounds	2h
8	Auscultation of the lungs. Adverse breath sounds	2h
9.	Additional methods for the study of patients with respiratory diseases	2h

10.	Independent work at the patient's bedside. Writing a fragment of a medical history	2h
11.	Modular lesson	2h
12.	Questioning and examination of patients with diseases of the circulatory system.	2h
13.	Palpation of the heart. Determination of apical, cardiac impulse, systolic and diastolic "trembling" in the region of the heart	2h
14.	Percussion of the heart. Methodology. Determination of the boundaries of relative and absolute cardiac dullness.	2h
15.	Percussion of the heart. Determination of the width of the vascular bundle, diameter and configuration of the heart	2h
16.	Auscultation of the heart. Auscultation rules. Heart sounds	2h
17.	Auscultation of the heart. Heart murmurs	2h
18.	Study of the properties of the peripheral pulse. AD, VD.	2h
19.	Functional methods for studying the state of the cardiovascular system	2h
20.	Fundamentals of the ECG. Normal EKG.	2h
21.	ECG signs of rhythm and conduction disturbances	2h
22.	Additional methods for the study of patients with diseases of the circulatory system.	2h
23.	Independent work at the patient's bedside. Writing a fragment of a medical history	2h
24.	Modular activity.	2h
25.	Questioning and examination of patients with diseases of the digestive system	2h
26.	Palpation and percussion of the abdomen. Methodology.	2h
27.	Additional methods for the study of patients with diseases of the digestive system	2h
28.	Questioning and examination of patients with diseases of the hepatobiliary system.	2h

29.	Palpation and percussion of the liver, gallbladder	2h
30.	Additional methods of examination of patients with diseases of the hepatobiliary system	2h
31.	Independent work at the patient's bedside. Writing a fragment of a medical history	2h
32.	Modular lesson	2h
