24 May 2023

O.V. Remizov

WORKING PROGRAM OF THE DISCIPLINE

"FORENSIC MEDICINE"

the main professional educational program of higher education is the specialty program in
the specialty 31.05.01 Medical business,
approved on 24.05.2023.

Form of training _____ is full-time
(full-time, part-time (evening), correspondence)

The period of development of OPOP VO _____ 6 years
(нормативный срок обучения)

Department of Pathological Anatomy with Forensic Medicine

Vladikavkaz, 2023

When developing the work program, the disciplines are based on:

1. The Federal State Educational Standard for the specialty 31.05.01 Medical business approved by the Ministry of Education and Science of the Russian Federation on August 12, 2020 (No. 988)

2. Curriculum for the specialty 31.05.01 Medical business

ЛД-21-01-21ИИ;

ЛД-21-02-22ИИ;

ЛД-21-03-23ИИ, approved by the Academic Council of the Federal State Budgetary Educational Institution of the Ministry of Health of the Russian Federation on May 24, 2023, Protocol No. 8.

The working program of the discipline was approved at the meeting of the Department of Pathological Anatomy with Forensic Medicine on May 22, 2023, Protocol No. 10.

The working program of the discipline was approved at the meeting of the central coordinating educational and Methodological Council of May 23, 2023, Protocol No. 5.

The working program of the discipline was approved by the Academic Council of the Federal State Budgetary Educational Institution of the Ministry of Health of the Russian Federation on May 24, 2023, Protocol No. 8.

Developers:

Docent, candidate of Medical Sciences

L.V. Tettsoeva

Assistant, candidate of Medical Sciences

A.A. Kaloeva

Reviewers:

Head of the Forensic Medical Examination Department
of Branch No. 2 "FGKU 111 of the Main State Center for
Forensic Medical and Forensic Examinations" of the Ministry of
Defense of the Russian Federation,
candidate of Medical Sciences

N.G. Oleinik

Head of the Department of Traumatology and Orthopedics
FSBI HPE «NOSMA» MOH Russia
doctor of Medical Sciences, professor

S.S. Sabaev

The content of the work program

1. name of the discipline;
2. the list of planned learning outcomes in the discipline, correlated with the planned results of the development of the educational program;
3. indication of the place of discipline in the structure of the educational program;
4. the amount of discipline in credit units indicating the number of academic or astronomical hours allocated for contact work of students with a teacher (by type of training sessions) and for independent work of students;
5. the content of the discipline, structured by topics (sections) with an indication of the number of academic or astronomical hours allocated to them and types of training sessions;
6. list of educational and methodological support for independent work of students in the discipline;
7. evaluation materials for the interim certification of students in the discipline;
8. the list of basic and additional educational literature necessary for the development of the discipline;
9. list of resources of the information and telecommunication network "Internet" (hereinafter referred to as the "Internet"), necessary for the development of the discipline;
10. methodological guidelines for students on the development of the discipline;
11. list of information technologies used in the implementation of the educational process in the discipline, including a list of software and information reference systems (if necessary);
12. description of the material and technical base necessary for the implementation of the educational process in the discipline;
13. conducting educational activities using e-learning and distance learning technologies.

2. The list of planned learning outcomes in the discipline and the results of the development of the educational program

10. Methodological guidelines for students on the development of the discipline

The training consists of classroom classes (72 hours), including a lecture course and practical exercises, and independent work (36 hours). The main study time is allocated for practical work on the

study of signs characteristic of a particular pathological process, in order to diagnose, establish the mechanism of damage formation, diagnose the prescription of death.

When studying the discipline, it is necessary to use the basic and additional recommended literature and master practical skills in macro- and microscopic diagnostics of pathological processes.

Practical classes are conducted in the form of answers to tests, oral questioning, demonstration of macro- and micro-preparations, presence at forensic autopsies, use of visual aids, solving situational problems, analysis of protocol parts of forensic medical documentation.

In accordance with the requirements of the Federal State Educational Standard, active and interactive forms of classes (videos, situational tasks, independent extracurricular work) are widely used in the educational process. The proportion of classes conducted in interactive forms is at least 20% of classroom classes.

Independent work of students implies the preparation of a systematic approach to the analysis of medical information, includes the study of additional literature, work with medical documentation, writing protocols for the initial examination of a corpse at the place of its discovery.

Work with educational literature is considered as a type of educational work in the discipline of forensic medicine and is performed within the hours allotted for its study (in the section of the SRS).

Each student is provided with access to the library collections of the Academy and the department. During the study of the discipline, students independently study macro- and micro-preparations, are present at autopsies.

The student's work in the group forms a sense of collectivism and sociability.

11. The list of information technologies used in the implementation of the educational process in the discipline:

Microsoft Office

Internet Explorer

12. Description of the material and technical base necessary for the implementation of the educational process in the discipline

№/ п	Name of the equipment	Quantity	Technical condition
1	2	3	4
Специальное оборудование			
1.	Computer	3	good
2.	A laptop	1	good
3.	Projector	1	needs to be replaced
4.	Copying equipment	3	good 2; needs to be replaced 1
Tables			
5.	Thematic tables	40	needs to be replaced
Macropreparations			
6.	Wet preparations	50	satisfactory

2. Conducting educational activities using e-learning and distance learning technologies

In the conditions of the introduction of restrictive measures (quarantine) associated with an unfavorable epidemiological situation, the threat of the spread of a new coronavirus infection and other

force majeure events that do not allow for face-to-face training, it is possible to study this discipline or part of it using e-learning and distance learning technologies.

Teaching of the discipline in the situations described above will be carried out through the development of an electronic course with access to video lectures and interactive course materials: presentations, articles, additional materials, tests and various tasks. When conducting training sessions, current performance monitoring, as well as intermediate certification of students, the platforms of the electronic information and educational environment of the academy and/ or other e-learning systems recommended for use at the academy, such as Moodle, Zoom, Webinar, etc. can be used.

Lectures can be presented in the form of audio, video files, "live lectures", etc.

Seminars and practical classes can be held on-line in both synchronous and asynchronous mode. Seminars can be held in the form of web conferences
